Education and Resource Solutions for Respiratory Care Practitioners

Education and Resource Solutions for Respiratory Care Practitioners

Vitalograph provide devices and services that help facilitate better identification, diagnosis, monitoring and management of respiratory diseases. This commitment has resulted in one of the world's widest and most innovative range of respiratory solutions.

We are committed to working with you to support medical practitioners, through education and resource solutions, in their quest to provide first class respiratory care and to ease the burden on over-stretched healthcare resources.

Identification of respiratory disease through screening and case selection

The fact that there are millions of people with undiagnosed and mis-diagnosed respiratory conditions such as COPD, presents medical professionals with a considerable challenge. How can they identify these people as accurately, simply and cost effectively as possible in order to achieve better clinical outcomes?

The easy to use Vitalograph copd-6 can help meet this challenge by screening out those who definitely do not have COPD, allowing spirometry resources to be focused on those most at risk.

Diagnosis and assessment of respiratory disease

Having identified that a person is at risk with COPD, full spirometry is needed to help confirm the diagnosis. Vitalograph offer a wide range of high performance, innovative spirometers all featuring the Fleisch pneumotachograph, the most robust and reliable flow measuring technology in the world.

Both handheld and desktop models are available and all connect to Spirotrac Software for enhanced functionality and capabilities.

Home monitoring and telemedicine solutions for chronic respiratory disorders

Effective management of chronic respiratory conditions such as CF, brittle asthma and COPD depends on careful patient monitoring to ensure that medical intervention is effective and that the condition is being well controlled.

Vitalograph offer a wide range of respiratory monitoring devices designed to provide reliable data that helps build a clear picture of how well the patient's condition is being managed.

Inhaler Training

The Vitalograph AIM™ (Aerosol Inhalation Monitor) is designed to assist medical practitioners in training subjects to use their inhaler correctly. Mastery of the correct technique will support more accurate drug delivery and good patient compliance, resulting in better disease management.

Monitoring Inhaler Use

The AIM is designed to allow integrated monitoring of inhaler technique and compliance.
